

**Amendments to the Claims**

1 Claim 1 (currently amended): A computer-implemented method of selecting among component-  
2 level views for rendering at a client device, comprising steps of:

3 receiving, at the client device, a markup language document that specifies a Web page for  
4 rendering on a display of the client device, wherein the specification of the Web page further  
5 comprises, for at least one component of the Web page, syntax defining a plurality of alternative  
6 selectable views of the component and conditions under which each of the views should be  
7 selected for rendering;

8 evaluating, at the client device, responsive to the receiving step, one or more factors to  
9 yield an evaluation result, wherein the one or more factors are determined from the specified  
10 conditions; [[and]]

11 using the evaluation result, at the client device, to select[[,]] a particular one of the from  
12 among a plurality of alternative selectable views of a particular the component; and  
13 rendering, on the display, [[a]] the Web page with the selected view to be rendered  
14 incorporated therein.

Claims 2 - 6 (canceled)

1 Claim 7 (currently amended): The method according to Claim 1, wherein the syntax defining the  
2 plurality of alternative selectable views are specified using comprises a scripting language  
3 syntax.

Serial No. 10/675,418

RSW920030221US1

1 Claim 8 (currently amended): The method according to Claim [[5]] 1, wherein the syntax  
2 defining the plurality of alternative selectable views comprises a markup language element in the  
3 markup language document ~~specifies the plurality of alternative selectable views~~, and wherein  
4 each of the alternative selectable views is specified as a child element of the markup language  
5 element.

1 Claim 9 (currently amended): The method according to Claim [[5]] 1, wherein the syntax  
2 defining the conditions is specified as executable logic within the markup language document  
3 ~~further specifies logic for use by the evaluating step.~~

1 Claim 10 (currently amended): The method according to Claim 7, wherein the syntax defining  
2 the conditions is specified as executable logic in the scripting language syntax ~~further specifies~~  
3 ~~logic for use by the evaluating step.~~

Claims 11 - 12 (canceled)

1 Claim 13 (currently amended): The method according to Claim [[11]] 1, wherein the evaluating  
2 step evaluates at least one dynamic factor pertaining to the client device.

1 Claim 14 (currently amended): The method according to Claim [[11]] 1, wherein the evaluating  
2 step evaluates at least one dynamic factor pertaining to a network to which the client device is  
3 operably connected.

Serial No. 10/675,418

RSW920030221US1

1 Claim 15 (currently amended): The method according to Claim ~~[[4]]~~ 1, wherein:

2 the specification of the Web page further comprises syntax defining a plurality of  
3 alternative selectable views for at least two each of one or more other components, and  
4 conditions under which each of the views of each of the at least two components should be  
5 selected for rendering;

6 the evaluating and using steps are performed for each of the at least two components; and  
7 the rendering step renders the Web page with the selected view for each of the at least  
8 two components incorporated therein.

Claims 16 - 17 (canceled)

1 Claim 18 (currently amended): The method according to Claim ~~[[16]]~~ 15, wherein the view  
2 selected for one or more of the at least two components comprising of the Web page dictates the  
3 view selected for one or more other ones of the ~~[[other]]~~ at least two components comprising of  
4 the Web page.

1 Claim 19 (currently amended): The method according to Claim ~~[[16]]~~ 15, wherein the view  
2 selected for each of the components comprising of the Web page is selected independently.

1 Claim 20 (currently amended): The method according to Claim ~~[[5]]~~ 1, wherein the syntax  
2 defining the conditions is specified in the markup language document includes as a reference to

3 externally-stored logic that performs the evaluating step.

Claims 21 - 25 (canceled)

1 Claim 26 (currently amended): A system for selecting among component-level views for  
2 rendering at a client device, comprising:

3 means for receiving, at the client device, a markup language document that specifies a  
4 Web page for rendering on a display of the client device, wherein the specification of the Web  
5 page further comprises, for at least one component of the Web page, syntax defining a plurality  
6 of alternative selectable views of the component and conditions under which each of the views  
7 should be selected for rendering;

8 means for evaluating, at the client device, responsive to operation of the means for  
9 receiving, one or more factors to yield an evaluation result, wherein the one or more factors are  
10 determined from the specified conditions;

11 means for using the evaluation result, at the client device, to select[[,]] a particular one of  
12 the from among a plurality of alternative selectable views of a particular the component, a view  
13 to be rendered; and

14 means for rendering, on the display, the Web page with the selected view incorporated  
15 therein as a portion of a Web page.

1 Claim 27 (currently amended): A computer program product for enabling selectable content  
2 rendering at a client device, the computer program product embodied on one or more computer-

3 readable media and further comprising:

4 computer-readable program code for receiving, at the client device, a markup language  
5 document that specifies a Web page for rendering on a display of the client device, wherein the  
6 specification of the Web page further comprises, for each of at least two components of the Web  
7 page, syntax defining a plurality of alternative selectable views of the component and conditions  
8 under which each of the views should be selected for rendering;

9 ~~computer-readable program code means for programmatically generating a syntax~~  
10 ~~specification which includes a plurality of alternative selectable views for at least one~~  
11 ~~component;~~

12 computer-readable program code ~~[[means]]~~ for evaluating, ~~at run-time, one or more~~  
13 ~~currently-applicable conditions; and at the client device for each of the at least two components,~~  
14 responsive to operation of the computer-readable program code for receiving, one or more factors  
15 to yield an evaluation result, wherein the one or more factors are determined from the specified  
16 conditions; [[and]]

17 computer-readable program code ~~[[means]]~~ for using ~~[[a]]~~ the evaluation result of the  
18 ~~evaluation to programmatically select, at the client device, from the syntax specification, a~~  
19 ~~particular one of the alternative selectable views for each of the at least [[one]] two~~  
20 ~~components[[.]]; and~~

21 means for rendering, on the display, the Web page with the selected view for each of the  
22 at least two components incorporated therein.

1 Claim 29 (new): The method according to Claim 1, wherein one of the one or more evaluated  
2 factors comprises a current window size of the display.

1 Claim 30 (new): The method according to Claim 1, wherein one of the one or more evaluated  
2 factors comprises a current processing load on the client device.

1 Claim 31 (new): The method according to Claim 1, wherein one of the one or more evaluated  
2 factors comprises applications currently executing at the client device.

1 Claim 32 (new): The method according to Claim 1, wherein one of the one or more evaluated  
2 factors comprises network connections currently open at the client device.
